Immediately available · Remote (EU / GCC hours) · Open to relocation: Ireland, Germany, Australia, New Zealand

SUMMARY

Network engineer with 8 years in enterprise and service-provider infrastructure, including 5 years running network operations for a managed connectivity provider serving 50–60 client companies and thousands of end users over a dedicated Philippines–Hong Kong offshore link. Migrated a production on-premises system to Google Cloud with zero downtime; administer Azure (AZ-104) and AWS environments and define infrastructure in Terraform. Promoted from NOC engineer to acting head of IT within one company. Azure Administrator Associate · AWS Cloud Practitioner · CompTIA Security+ · Fortinet NSE 2 · CCNA (2020–2023).

CORE SKILLS

Cloud: Azure (VNet, NSG, VPN Gateway, Entra ID, VM/storage administration — AZ-104), AWS (VPC, S3, CloudFront, Route 53, ACM, IAM), Google Cloud (Compute Engine, workload migration)

Infrastructure as code, servers & automation: Terraform, GitHub Actions CI, Git, Bash; Linux (Ubuntu, CentOS); VMware ESXi on Dell PowerEdge

Networking: Cisco IOS routing & switching, OSPF, EIGRP, BGP, VLAN/STP, international transit and offshore egress design, IPsec site-to-site VPN, WAN/LAN design, Fortinet FortiGate configuration; wireless (Aruba Instant On, Ruijie, Cisco)

Monitoring & operations: Zabbix, Cacti, MRTG, FastNetMon, PingPlotter; ITIL-style incident/problem management, RCA, SLA reporting, Jira Service Management, SOP authoring

Endpoint & workplace: Hexnode MDM (Windows/macOS), Microsoft 365 administration, Windows/macOS deployment and patching

EXPERIENCE

Snoonu — Doha, Qatar

Aug 2025 – Feb 2026

IT Executive (Infrastructure & Operations)

- Migrated the company's on-premises ZKBioTime attendance platform — 15 biometric terminals serving 500+ staff — to Google Cloud with zero downtime, delivered as an assigned project alongside daily operations.
- Ran the Snoonu dark-store IT refresh: gathered requirements with store managers, audited assets for replacement or upgrade, and right-sized each store's internet bandwidth after verifying the reported slowness.
- Deployed and managed the network and firewall estate — IPsec site-to-site VPNs, switching and wireless — supporting 500+ endpoints.
- Led the department's ITSM gap analysis (solo project; analysis and action plan delivered), and owned incident lifecycle management in Jira to SLA.
- Managed 500+ Windows and macOS endpoints through Hexnode MDM: approved-application deployment, security patching and compliance reporting.
- Managed identity and access for enterprise applications with a monthly recurring IAM audit; owned vendor management, procurement and the licence lifecycle; primary on-call for critical incidents.

New Oriental Club88 — Parañaque, Philippines

Aug 2019 – Jan 2025

Managed connectivity and IT services provider: internet connectivity, managed network and end-user support for 50–60 client companies (thousands of users), operating a dedicated Philippines–Hong Kong offshore link with Hong Kong IP address space so client traffic egresses via Hong Kong ISPs. 13-person IT/NOC department. Promoted to Lead Network Operations Engineer in 2021; title expanded to IT Supervisor as responsibilities grew.

Lead Network Operations Engineer → IT Supervisor (acting head of IT)

Jun 2021 – Jan 2025

- Ran the IT function day-to-day on behalf of the IT Manager: department strategy and reporting, purchase approvals under delegated authority, team scheduling, and the department SOP (co-author).
- One of three supervisors over a 9-engineer network operations team: led and coached the engineers, ran team meetings, structured training and advanced-skills development, and acted as final escalation point 24×7.

- Delivered the core network upgrade — replaced the Cisco core routers at the Hong Kong offshore edge and the Cisco core switches in the Philippines — with minimal impact on client services carried over the international link.
- Introduced Zabbix, Cacti, MRTG and FastNetMon monitoring, moving operations from ticket-driven reaction to proactive detection of link, capacity and DDoS events.
- Owned major-incident response for escalated outages, coordinating internal teams, ISPs and hardware vendors at all hours; led root-cause analysis and remediation for WAN/LAN incidents.
- Planned service levels and capacity, built the data-collection and reporting for application and infrastructure health, and installed and administered the Linux servers (Ubuntu, CentOS) behind monitoring and infrastructure services.

Network Operations Engineer

Aug 2019 – May 2021

- Monitored network stability and performance (Cacti, MRTG, Zabbix, PingPlotter); delivered Level-1/2 troubleshooting, line testing and device configuration; drove ISP and vendor trouble tickets to resolution.
- Deployed network devices for new client offices; performed scheduled configuration changes and OS upgrades; produced daily, weekly and monthly network operations reports.

Earlier experience

2017 – 2019

- Concentrix — Customer Care Analyst (Jul 2018 – Sep 2019), technical support to SLA with first-contact-resolution focus · Servflex Inc. — Project Database Engineer (Nov 2017 – May 2018), IP address database and client work orders · Faire Technologies Inc. — Field Engineer, design role (Jan – Nov 2017), CCTV and access-control design, BOMs and costing.

Career note: relocated to Qatar in 2025 (earned AWS Cloud Practitioner and CompTIA Security+); on parental leave since Feb 2026, used to earn AZ-104 and for the Terraform work below.

SELECTED PROJECTS

Open-source NOC tooling stack, self-hosted on Ubuntu — New Oriental Club88

- Built and ran the team's operations tooling on on-premises Ubuntu servers: Zabbix (network monitoring), FastNetMon (DDoS detection, replacing an expired Blue Coat subscription), Oxidized (device configuration backup and versioning — LibreNMS as the inventory feed, later replaced by a CSV feed after latency issues), NetBox (IPAM/DCIM source of truth) and Snipe-IT (asset management with bi-weekly backups; also trialed on AWS EC2).

Cloud-vs-on-premises monitoring evaluation — Snoonu

2025

- Under a cloud-first policy, deployed Zabbix in the cloud and proved it against the Pakistan office over a site-to-site IPsec VPN; tracked the monthly running cost, found it uneconomic, and recommended an on-premises server with only SNMP traffic crossing the VPN — delivered as a written cost and recommendation report to the IT Manager.

AWS static-site infrastructure in Terraform — github.com/jkdeleon/tumbatumba

2026

- Authored a Terraform stack (private S3 origin, CloudFront with Origin Access Control, ACM, Route 53) with Bash/PowerShell deployment scripts and GitHub Actions CI with branch protection; AWS deployment pending — the site is currently served from Vercel.

CERTIFICATIONS

- Microsoft Certified: Azure Administrator Associate (AZ-104) — Apr 2026
- AWS Certified Cloud Practitioner (CLF-C02) — May 2025
- CompTIA Security+ — Jul 2025
- Fortinet NSE 1 and NSE 2: Network Security Associate
- Cisco Certified Network Associate — Routing & Switching (2020 – 2023)

EDUCATION

BSc Electronics & Communication Engineering — National University, Manila

2016

WES-evaluated as equivalent to a four-year Canadian bachelor's degree.

Diploma, ECE Technology (ladderized programme) — Rizal Technological University

2014
